

MISSION ROSETTA COMET CHASER

In 2014, 20 years after the most ambitious mission dedicated to comet exploration was launched, the Rosetta Mission set a landmark in the History of Space exploration.

This film recounts the final climatic year of this operation from the wake up phase to the Philae probe landing on Comet 67 P. A technological feat which took place 450 Million km from the Earth with one main goal : to explore with un-precedented precision and proximity this small icy body and decipher the origins of the solar system and of life itself...

On 12th November 2014 Philae lander achieved the 1st ever landing on a comet and became a Space celebrity overnight! This film takes viewers on this unique space odyssey, into deep space and behind the scene in the control room with scientists.

Beyond the excitement and suspense of this daring mission, the film reveals why comet matters. A thrilling human and scientific adventure which will deepen our understanding about the origin of life on Earth.
